

## **Wireless Garage Door Closer Extends Delay Times**

PROTECTRIX<sup>TM</sup> (division of Excentual Enterprises) announced today the introduction of new features with their popular family of automatic garage door closing devices, extending the delay timer to as long as 4hours and as short as 1minute.

Phoenix, AZ (PRWeb) November 7, 2007 -- PROTECTRIX<sup>TM</sup> announced today the introduction of new features with their popular family of automatic garage door closing devices.

The new features provide extended timer delay settings of 1minute to 4hours. The previous family of garage door closers only had delay settings of 5minutes to 45minutes.

Protectrix is primarily sold to the residential market but these new features were requested by the business sector. Businesses had doors they wanted closed immediately after customers/residents left the premises and others wanted to ensure their points of entry were closed well after business hours. The short delay times allowed the doors to close quickly after residents left such as in a shared or public garage. The long delay times allowed workers to keep the garage door open while working and only close the garage if necessary.

Protectrix is a small wireless device that attaches to the inside of a garage door and closes the garage when forgotten. Contact your insurance company to find out if they provide a homeowners insurance discount. Protectrix makes an excellent Christmas gift for the homeowner and has recently been featured in SkyMall Magazine and by The Gadgeteer.
